Opportunity statement

There is a gap in the recovery industry where patients who are recently discharged from Physical Therapy are not fully recovered from their musculoskeletal injury. Patients leave structured care and are expected to manage their own recovery independently, with little guidance and personal accountability. As a result, many experience reinjury, chronic pain, or incomplete recovery. This creates an opportunity to build a guided post-PT support that bridges the gap between discharge and full recovery.

Problem Statement

Patients do not know:

- What exercises to do
- How frequently to do the exercise
- When to increase or decrease difficulty (Progress/Regress)
- If they are doing the exercise correctly
- If they are fully recovered
- Insurance coverage
- Medication vs. exercise

Patients lack:

- Medical knowledge
- Equipment
- Accountability
- Motivation

Patient's experience:

- Confusion

- Fear of reinjury
- Lack of confidence
- Frustration
- Pain

Systemic issue:

- Insurance companies want to save money
- Lack of PTs (2022 → deficit of 12,000 full-time)
- Growing aging population
- PT relies on one-on-one care
- Technology is too expensive
- PT care is too expensive
- Telehealth services for recovery knowledge are too expensive
- There is no bridging product for after-care recovery

Target Customer

Primary Customer

- Adults 25-55 & geriatric age range
- Sustained musculoskeletal injury
- Discharged from physical therapy
- Motivated to recover but unsure how to continue recovery
- Insurance stopped covering their recovery process

Secondary customer

- Young athletes, active students, & workers

- Sustained injury that debilitates or makes activity more difficult achieve success in
- Went through PT
- Middle-class individual → can't afford to expend time and money on the recovery process
- Lack of knowledge of the aging body and its injuries

Value Proposition

Statements

- Builds confidence
- Reduces fear of activity
- Keeps the patient accountable
- Creates routine
- Reduces travel
- Tailored recovery
- Time saving

Why ME?

- I am a health sciences major with a focus in health innovation, striving to make the recovery process more effective. I've experienced the recovery process, and I've heard similar stories of recovery issues from patients, doctors, and friends.

Why NOW?

- The rehabilitative process is outdated and needs change. The discharge process is controlled by insurance companies, and a PT who doesn't know exactly what we are experiencing. There is a significant lack of structure and guidance once

patients transfer out of PT. To maintain PT after health coverage, patients must pay an exorbitant amount of money to sustain progress. Insurance-based centers have therapists who cover two or more patients, lessening progress and feedback.

Why is this BETTER?

- Bloom Recovery will provide structured at-home guidance to keep patients accountable, with tailored, time-efficient recovery training, helping them confidently continue recovery and reduce reinjury risk.

Product

Models

- Base Bloom Recovery Kit
    - Single purchase
    - Curated Kit
    - Digital guide plan for recovery needs
    - Live feedback with the equipment
    - Notifications/scheduling
- Rentalable equipment
    - Expensive items that lose their need over time
    - Rent to purchase
    - Custom plan with equipment for an at-home workout plan
- Medication, Ointment, & supplements (subscription-based)
    - Access to body care treatment

MVP Definition

Included

- Progression schedule
- Box with equipment
- Basic app design

NOT included

- AI
- APP flow
- Other recovery kits
- Wearables

Business Model

D2C

- $100/month subscription
- $300 program bundle
- Equipment upselling
- $60 Rental

B2B2C

- Clinics/Therapists pay per patient to continue relations
- Revenue share models
- Licensing model

GTM strategy

- Partner with small clinics
- Campus/student athletic partnerships
- Social media content
- Friends and family recommendations

Key Assumptions

- Patients feel lost after discharge
- Willingness to pay for guidance and a plan
- Prefer a structured plan over YouTube
- Clinics are open to partnerships
- Clinics are willing to share patients
- Accountability improves adherence
- Continuation of the program

Success Metrics

- Activation
- Completion
- Weekly Adherence
- Improvement
- Referral rate

Long-Term Vision

- Outside of the US
- Insurance coverage
- AI recovery personalization
- Custom Bloom Equipment
- Chronic pain prevention platform
